

ABSTRACT OF THE DISCLOSURE

5        A computer-implemented method of processing a  
document provides a user with a plurality of nested  
test modes for creating, reviewing and retrieving a  
plurality of different document configurations  
represented by different document data sets. The  
10      nested test modes are activated upon user request and a  
starting data set of the document is stored on a memory  
and restored after leaving the test mode. By nesting a  
plurality of test modes, the user can create a  
plurality of different configurations of a document and  
15      easily retrieve the data of every one of these  
configurations.
